SUMMARY

Software Engineer with ~1 year of production experience building scalable web systems end-to-end. Shipped a live MERN job board with LLM-powered classification, a SaaS backend with Docker orchestration, and a Node.js/Express RBAC API serving 300+ users. Strong across the full stack — React, Node.js, PostgreSQL, MongoDB — with hands-on experience in API security, automation pipelines, and cloud deployment. Seeking SWE / SDE roles where ownership and working software matter.

EXPERIENCE

Software Engineer — Full Stack (Freelance)

Jul 2025 – Present

Self-employed | Remote (Germany Market)

- Designed and deployed a production MERN job board (React 19, TypeScript, Vite, Tailwind CSS, Node.js/Express, MongoDB) targeting English-speaking roles in Germany — live and continuously updated.
- Built 20+ config-driven web scrapers with pagination, deduplication, upserts, and scheduled ingestion via node-cron; integrated Groq LLM for automated job classification (Germany / English / German-required).
- Implemented full auth and moderation system: JWT authentication, admin workflows, analytics endpoints, and dead-link validation (HTTP HEAD, auto-removal of 404/410 listings).

Software Engineer Intern — Full Stack

Apr 2025 – Jun 2025

SniperThink | Remote, India

- Built a scalable PostgreSQL data layer for real-time sales metrics ingestion and aggregation, increasing processing throughput by 35%.
- Developed a Node.js/Express.js REST API with RBAC supporting 300+ users; implemented plan-based entitlement checks to enforce licensing constraints.
- Delivered KPI dashboards and analytical charts (trend, breakdown) integrated with backend APIs to surface live performance insights.

PROJECTS

ProxyClaw — AI Agent Deployment SaaS

Feb 2026 – Present

proxyclaw.xyz | Layer3Studios

- Co-engineered the backend of ProxyClaw — a live SaaS platform for deploying AI agents — with Docker-based orchestration and service modules covering deployments, billing, and infrastructure.
- Implemented production-grade API security and reliability: express-rate-limit (100 req/15 min), Helmet, CORS, 10 MB payload caps, WebSocket upgrade handling, and startup retry (max 5 attempts).
- Built the frontend with React 19, TanStack Query, Zustand, Zod, Recharts, and Framer Motion to support real-time, interactive product workflows.

SKILLS

Languages	JavaScript (ES6+), TypeScript, Java (DSA)
Frameworks & Tools	React 19, Node.js, Express.js, REST APIs, WebSockets, Tailwind CSS, Docker, AWS, Git/GitHub
Databases	MongoDB, PostgreSQL, MySQL
Security & Auth	JWT, RBAC, OAuth2 (PKCE), bcrypt, CORS, Helmet, Rate Limiting
Automation & AI	node-cron, Groq LLM, Web Scraping (20+ scrapers), CI/CD basics

EDUCATION

B.Tech — Artificial Intelligence & Machine Learning

Graduating 2026

Lakshmi Narayan College of Technology, Bhopal
