PROFESSIONAL SUMMARY

Full-stack engineer building production SaaS platforms across backend systems, multi-tenant applications, AI-assisted workflows, and third-party integrations. Experienced with Node.js, React, MongoDB, REST APIs, AWS, security engineering, and LLM integration, with a focus on reliability, data integrity, and scalable product development.

TECHNICAL SKILLS

Languages: JavaScript ES6+, TypeScript, Python

Frontend: React, Vite, Tailwind CSS, Redux Toolkit

Backend: Node.js, Express.js, REST APIs, WebSockets, JWT, RBAC, bcrypt, node-cron

Databases: MongoDB, Mongoose, MySQL

Cloud: AWS S3, SES, EC2, Docker, PM2, Git, GitHub, CI/CD

Security: OAuth2 PKCE, HMAC, CORS, Rate Limiting

AI: LLM Integration, Prompt Engineering, Groq, Llama 3.1

EXPERIENCE

Software Development Engineer : Livo Assistant

Jun 2026 – Present

Chillspace Labs Pvt. Ltd.

Bengaluru, India

- Architected and shipped a GST reconciliation engine from scratch, implementing 2B matching, ITC carry-forward, versioned reconciliation history, and the full return lifecycle for a CA-firm compliance platform.
- Re-engineered Zoho Books ledger synchronization with paginated ingestion, watermark-based incremental sync, retry/backoff, and per-account failure isolation; raised the account-fetch ceiling from **200 to 5,000** and eliminated silent data-loss and rate-limit cascade failures.
- Built and re-architected a full payroll platform, evolving the workflow into a versioned, non-destructive accept/reject/cancel lifecycle with validation, safe spreadsheet exports, and automated PDF/email outputs.
- Led application-security hardening across cross-tenant IDOR, XLSX formula injection, email-header injection, XSS unsafe PDF previews, and authentication abuse; redesigned login throttling with separate DoS/brute-force controls and **60 automated tests**.

Software Engineer : Full Stack

Jul 2025 – May 2026

Freelance

Remote — Germany Market | englishjobsgermany.com

- Re-architected a remote job scraping pipeline across **9 ATS platforms and 2,853 job boards**, implementing SHA-256 change detection, in-memory deduplication, safe expiry, and MongoDB bulk writes; reduced execution from a **45-minute timeout to approximately 6 minutes**, with **39/39 scheduled runs succeeding**.
- Built end-to-end **WhatsApp job-distribution automation**, integrating scheduled workflows, job deduplication, and platform data to automate recurring job content delivery and user engagement.
- Engineered production AI workflows using **Gemini and Gemma** for German-requirement classification, structured extraction, and resume matching; implemented pre-LLM filtering, confidence-based review, multi-model fallback, and quota management for reliable LLM execution.
- Designed production reliability improvements including MongoDB change-stream cache synchronization, indexed in-memory search, asynchronous resume parsing, and cache warm-up handling; reduced AI cache storage by **97.5% (87 MB to 2.2 MB)**.

Software Engineer Intern : Full Stack

Apr 2025 – Jun 2025

SniperThink

Remote, India

- Rebuilt the PostgreSQL data layer and designed a Node.js/Express REST API with RBAC, resolving critical data-consistency failures and enforcing isolated Admin, Owner, and User access.

PROJECTS

JobMesh : Job Aggregation Platform

Personal Project

jobmesh.in

- Engineered automated scraping across **2,000+ listings from 100+ companies**, using upsert-based deduplication and multi-ATS ingestion for consistent data processing.
- Integrated LLM-powered classification and keyword filtering, driving organic usage across India.

EDUCATION

B.Tech : Artificial Intelligence and Machine Learning

Jun 2026

Lakshmi Narayan College of Technology, Bhopal
